Deck: Solar System - English

Topic: Solar System | Language: English

Cards: 3

Card 1:

Front: What is the Solar System?

Back: The Solar System is a gravitationally bound system comprising the Sun and all celestial bodies that are influenced by its gravity. This includes eight planets, their moons, dwarf planets, comets, asteroids, and various other small bodies. The Sun, a medium-sized star at the center, contains over 99% of the total mass of the Solar System.

Card 2:

Front: Name the eight planets in the Solar System.

Back: The eight planets in the Solar System, in order from the Sun, are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Each planet has unique characteristics, such as size, composition, and atmosphere.

Card 3:

Front: What are dwarf planets?

Back: Dwarf planets are celestial bodies that orbit the Sun and are similar to planets but do not clear their orbital paths of other debris. Examples include Pluto, Eris, Haumea, and Makemake. They are classified separately from the major planets due to their inability to dominate their orbits.
